

# Santiago Billeci

santiago@tago.works  
California, US

## About Me

Passionate web and app developer focused on both front-end and back-end development. Despite still being a high school senior, a full-stack app has already been built and multiple websites launched. Proficient in a range of technologies and frameworks, delivering comprehensive digital solutions from start to finish. Always looking for opportunities to expand knowledge and refine skills, with an emphasis on user-friendly, intuitive design that people love to interact with. A strong believer in the power of development and open-source for driving positive change. Ready to contribute ideas and skills toward creating impactful programs or products.

---

## Skills

- **Programming Languages & Frameworks:** JavaScript, Python, Electron, React, Next.js
  - **Front-End:** HTML, CSS, Tailwind CSS, Framer Motion, NextUI, Shadcn/UI, MagicUI
  - **Full-Stack & Back-End:** Node.js, Next.js, Flask, Google Firebase
  - **Development Expertise:** Full-stack development, Back-end Development, Front-end Development
- 

## My Work

### [Ascendara](#) (03/2021 – Present)

A desktop application to streamline the management and playback of pre-installed games, including features for organization, metadata handling, and a unified user interface.

### [Streamora](#) (06/2024 – 11/2024)

A web app for playing YouTube tracks, creating playlists, searching songs, and more. Built with Next.js and Google Firebase.

### [Flare](#) (02/2024 – 05/2024)

A heavily modified version of AKoD designed for self-hosted license management, featuring node locking, IP locking, and floating licenses. Provides customizable key management without relying on third-party services.

### [Spotium](#) (02/2020 – 07/2021)

A Python app that enables ad-free Spotify listening. Developed with Tkinter, supporting both Mac and Windows.

---

## Projects

You can view all my projects on my [GitHub](#) or my [website](#)

### [Ascendara Download Handler Extension](#)

A browser extension that sends downloads from known (or added) provider straight to Ascendara. Created for Chrome and Firefox

### [Activating Keys on Discord](#)

Simple key/license authenticator utilizing GitHub and Netlify services for verification via Discord bot.

### [PyJONDB](#)

Encrypted, JSON-based database supporting collections, document operations, and aggregation. Developed entirely in Python. Santiago Billeci [santiago@tago.works](mailto:santiago@tago.works) Vacaville, CA

### [Lumina](#)

A sleek, modern website template designed for developers and tech professionals to showcase their skills and projects.

### [NightPanel](#)

A minimalistic, dark-themed UI designed for modern websites. Combining a sleek layout with organized content, providing an intuitive and visually appealing experience.

### [Fluorescent](#)

a beautiful landing page template featuring smooth animations, gradient backgrounds, and modern UI components.
